

I am Maxim Tint, Founder & CEO of GTRIIP.

We are innovators and creators who are passionate about document-less human travel by creating new software products and experiences.

We revolutionize check-in experience by making it faster and safer. We deliver the best possible hotel guest experiences using the world's first hotel check-in with a selfie.

At GTRIIP, we offer the leading platform for biometrics-driven, document-less travel technology.

We partner with commercial properties such as:

- Hotels
- Offices
- Coworking Spaces

Our patented document-less check-in enabled by AI-powered biometric technology makes all the difference.

This innovation allows our clients' users to skip the hassle of long registration procedures, and check-in with a selfie instead. With GTRIIP's facial recognition feature, each user will be uniquely identified once initially registered into your business' CRM system. Not only is our technology innovative, but our products powered by them are too.

Our hotel product includes a highly integrated platform with pre-built interfaces to major hotel systems, cloud technology that is secure yet scalable on demand, and a seamless and intuitive end-to-end user experience. Our vision is to create a world where document-less check-in and travel is the standard for optimized user experiences.

Our products are designed to be more sustainable and environmentally friendly too. Our software runs on smartphone cameras humans already have. There is no need to manufacture, power, or maintain additional carbon footprints such as physical kiosks, cameras, cards, or chips.

GTRIIP

Founder & CEO

July 2014 - Present

As Founder and CEO of GTRIIP at the “tribal stage” we are at now, I specialize in scaling the business and making sure we are making the right products at the right time with the right technology. We seek out opportunities to raise capital and resources to blitzscale our products that have already reached a proven product-market fit. We are fiercely passionate about innovation and making sure we leave behind this planet a slightly better place with the use of technological applications. Our mission is to allow humans to travel or enter places without physical documents or cards to verify their identity.

GTRIIP is a digital identity platform for global citizens. We use machine learning to verify photo IDs automatically, and biometric sensors on smartphones to identify users for contactless check-in and access at commercial properties. GTRIIP serves 25,000 rooms and access points of customer hotels and offices, and is backed by Global Brain, KDDI Open Innovation Fund, Keppel Corporation, M1 Limited, NUS Enterprise, and Accord Ventures.
